ABSTARCT

The Airline Service System is a digital platform that streamlines flight booking and management. It displays real-time flight availability, provides detailed flight information, and maintains a secure database of passenger details for personalized service.

Modules

1. Flight information module.
2. Passenger details module.
3. Ticket booking process module.
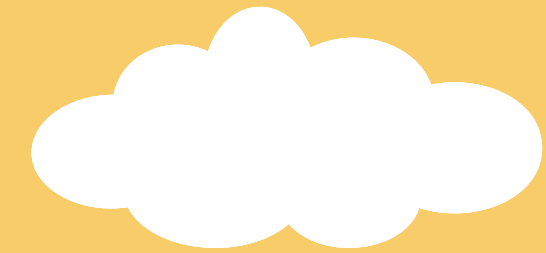

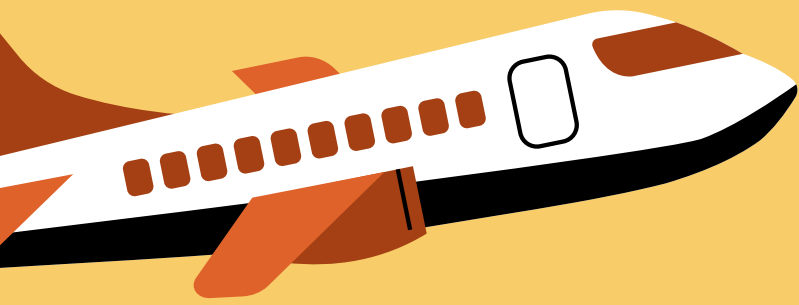

Flight Information module

Details of the flight like

- Their route
- Type of class

Direct/connecting flights.

Facility requirements
